Subject: Ex. 6 - Personal Privacy They are using well water to fill tanks

Rich,

When I was over at the Ex. 6 - Personal Privacy residence earlier today to fill the Simmons Transportation Trailer and the existing water buffalo with potable water from the Palmeri tanker, I observed the following.

A green garden hose was connected to the well, ran along the tree line, connected to an orange garden hose and then the orange garden hose was placed into the existing Cabot water tank which was filled.

It was also observed that the vent cap was removed from the exterior vent line on the Simmons trailer, which would facilitate filling the tank from outside the trailer.

Also attached is the Palmeri delivery slip with the drivers observations noting that there is another water source being used to fill this system other than the potable water that they are supplying

I just wanted to inform you of this occurrence.
